IN A NUTSHELL

Cyber security is the protection of computer systems from theft or damage of hardware, software, data and information, as well as disruption of digital processes and services. Due to technological progress, local authorities, business and citizens become increasingly reliant on computer systems for work, education and everyday living. Therefore, the protection of these systems become more important.

This introductory course is first in a series of cyber security courses. The objective of this series is to create awareness for the importance of cyber security and to promote the flourishing of an information security culture in all spheres of personal and professional life. In this introduction course you will gain familiarity with general principles and technical terms of cyber security.
